INFLUENCE OF THE PESTICIDE DUMP ON THE ENVIRONMENT

Monograph
Edited by Krystyna A. Skibniewska

Olsztyn 2010
Contents

Preface ................................................................................................................................. 5
Krystyna A. Skibniewska

Chapter 1 ......................................................................................................................... 7
Tadeusz Banaszkiewicz
Evolution of Pesticide Use

Chapter 2 ........................................................................................................................ 19
Katarzyna Ignatowicz
Problem of Pesticide Dumps in Poland in the Beginning of XXI Century

Chapter 3 ........................................................................................................................ 31
Tadeusz Banaszkiewicz
Biomonitoring in the Assessment of Chemical Threats to the Environment

Chapter 4 ......................................................................................................................... 43
Ewa Jastrzębska
The Effect of Crop Protection Chemicals on Soil-Dwelling Microorganisms

Chapter 5 ......................................................................................................................... 55
Janusz Guziur, Jan Pawluczuk, Józef Szarek, Krystyna A. Skibniewska,
Katarzyna Sawicka-Kapusta, Marta Zakrzewska, Mirosław Grzybowski
Characterization of the Pesticide Dump Area in Warlity Wielkie, Poland

Chapter 6 ......................................................................................................................... 67
Krystyna A. Skibniewska, Janusz Guziur, Mirosław Grzybowski, Jan Pawluczuk,
Józef Szarek, Maria Długaszek, Katarzyna Sawicka-Kapusta, Marta Zakrzewska
Transfer of Contaminants from the Area of Pesticide Dump into the Surrounding Ecosystems
Chapter 7 ................................................................................................................................. 79
Mirosław Grzybowski, Józef Szarek, Krystyna Skibniewska, Janusz Guziur, Katarzyna Sawicka-Kapusta, Marta Zakrzewska

Changes in Plant Communities Influenced by Pesticide Dump

Chapter 8 ..................................................................................................................................... 91
Katarzyna Sawicka-Kapusta, Paulina Baran, Marta Zakrzewska, Józef Szarek, Joanna Hajduk, Justyna Porębska, Krystyna A. Skibniewska, Janusz Guziur, Mirosław Grzybowski, Izabella Babińska

Effect of a Pesticide Dump on the Level of Heavy Metals in Tissues of Mice

Chapter 9 ...................................................................................................................................... 107
Marta Zakrzewska, Katarzyna Sawicka-Kapusta, Józef Szarek, Gabriela Bydłoń, Paulina Baran, Katarzyna Dudzińska, Krystyna A. Skibniewska, Janusz Guziur, Mirosław Grzybowski, Izabella Babińska

Bioindication of the Environment Contamination by Heavy Metals

Chapter 10 ...................................................................................................................................... 121
Izabella Babińska

Structural Lesions of Tissues and Cells Influenced by Environmental Pollution
The Faculty of Environmental Management and Agriculture of University of Warmia and Mazury in Olsztyn unites tradition and modernity. The result of its 60 year history is the inheritance of the spirit of numerous scholars of Polish agriculture sciences. From the very beginning, it has educated specialists, who, irrespective of the political and economic situation, have tried to develop modern farming in the Warmia and Mazury region and outside its borders. The multidisciplinary education made the offered programs of studies attractive and laid the foundation for new faculties of technology, natural sciences and economics based on the growing scientific resources. What should also be stressed is the contribution of the Faculty staff to the preparatory work concerning organizational and curriculum planning issues of the University. Today the Faculty, which is at the top of the national rankings, offers candidates the widest range of areas of studies and specializations. It enjoys the great interest of youth from the north-east of Poland. There are always more candidates than the university can admit. The Faculty offers engineer and master’s studies, both regular and extramural.

The Faculty of Agriculture and Environmental Management is a university unit which promotes people of both collective and individual success. The exceptional staff of academic teachers guarantee a standard of education which is comparable, and sometimes even higher than that offered at similar academic institutions. Those admitted every year in the Faculty of Environmental Management and Agriculture (ca. 800 students).

There are 252 persons of faculty and staff:

- 34 full professors
- 26 associate professors
- 98 doctors (assistant professors)
- 4 assistants
- 4 lecturers
- 87 supporting persons (administrations and technicians) and others.

The main topics of research work:

- biological and agrotechnical determinations of crops productivity and landscape management
- methods and techniques of crop nutrition and crop protection as regards productions of safe food and the needs of environmental protection
- methods and techniques of land reclamation
- methods of growing and technological value of yield of vegetable and fruit crops
- methods of sewage and waste utilization methods of estimation of alternative crops and development of seed production of alternative crops
- creation of new genotypes of crop plants
- multifunctional development of rural areas

The main fields of education:

- Agronomy
- Engineering and systems of agricultural production
- Environment protection
- Horticulture
- Landscape architecture
